

Lesson 4: Create a School Habitat Center

Using the species that the students learned about from the previous activities and presented to the class, supply the center with books about those animals, plants, and their habitats. Have the students take charge of this center. Assign a week to each student to display his or her information; include the student's reports as another resource. It can be a table or a shelf on a bookcase as long as it is accessible for the students to use. If students used the internet as a resource for their information assess the sites to ensure they were appropriate and bookmark them on the computers in your classroom so students can explore them. If the students used books that are not accessible from the school or classroom library ask the students to bring the books in to share with the class for the week.
